

December 2012 Newsletter - SBCSR Storage Day 2012 Pre-release

Helping customers to improve their stores

“Over the years we have worked on many stores with inherent design problems, revitalising them with cost effective solutions and proven results.”

The Refrigerated Store

Problem: Low air flows through refrigeration.

Solution: Remedial works resulted in increasing airflow from 22cfm to 39cfm, an increase in efficiency of over 60%.

Problem: Lack of control over expansion valves and defrost.

Solution: Improvements to system resulted in customers claiming an improvement of over 30%.

The Bulk Store

Problem: A customer who was concerned with consistent crop issues year on year.

Solution: By making some structural alterations we were able to improve the air flow by 100%.

Problem: A further store was investigated for airflow issues.

Solution: We re-designed the fans and in doing so reduced the energy input by over 35%.

**We can bring impressive savings to your running costs.
Come and see us on Stand 21 to discuss what we can do for you.**
