

PosiStor

The **positive** solution to your box storage issues

Taking positive air flow storage into the future.

The new PosiStor – positive by design.

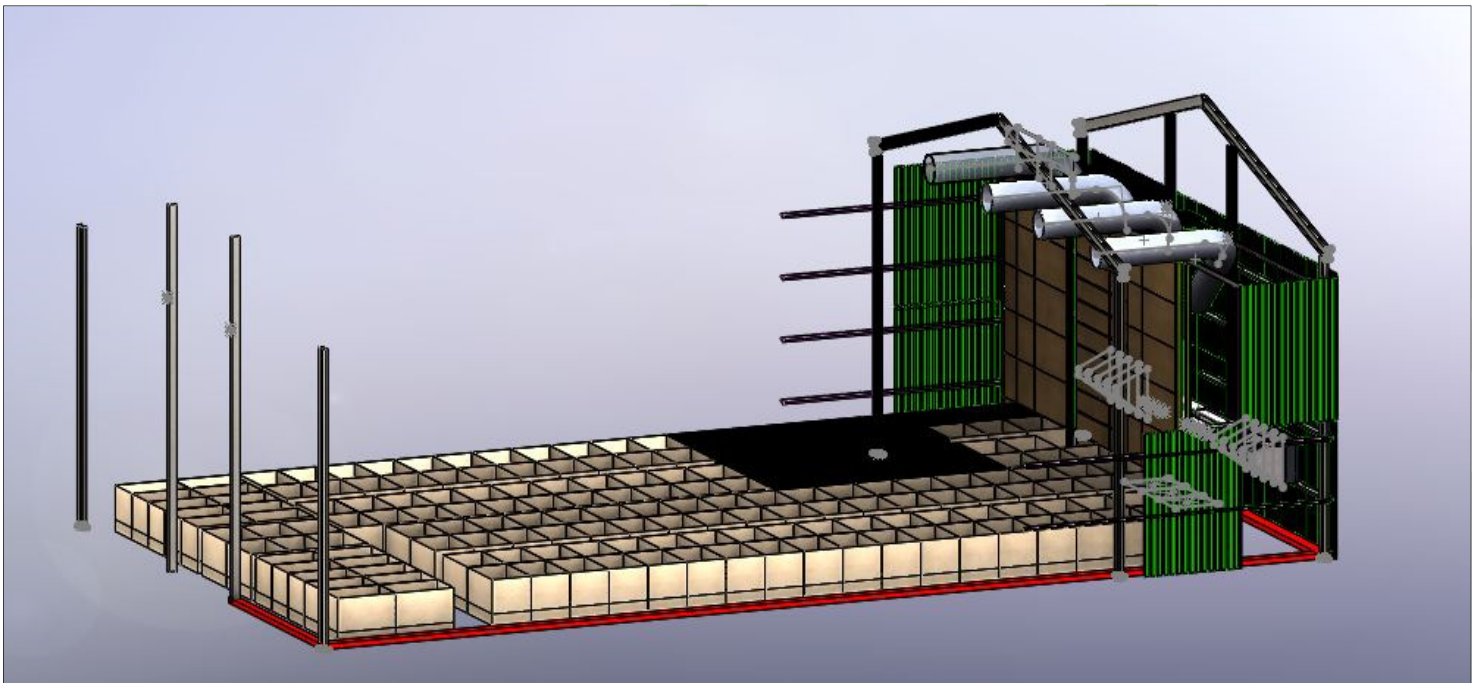

We installed the first commercial suction systems in the UK in 1995 and have been building them ever since.

PosiStor is the latest development in positive ventilation for box stores – read further to see how it can help you.

PosiStor is our latest development in positive ventilation providing an updated solution for box stores including extra features and technologies.

- Fully automated in-line fogging system requires no auxiliary fans, with an integrated automatic purge taking care of all aspects of the process.
- High positive airflows for drying and curing – low positive flows for energy savings and fogging.
- Proportional exhaust suction system – guaranteed even suction under all conditions from refrigeration to ambient.
- In-line air mix and options for in-line refrigeration and humidity with auto bypass of equipment whilst fogging.
- Air-mix using our proven insulated and sealed hatch doors with insulated wall boxes.
- Adiabatic cooling with predictive cooling and roof dew-point control.
- Easy access to refrigeration coils for maintenance; all louvres at floor level.

For a bespoke service solution to bring your existing store up to standard or from a new green field site, including a full in house 3D design for both, get in touch with us.

Optimise your store and it's possibilities today.
